Azure Machine Learning Solution Components

Workflow

Data Pipeline

Infrastructure

Overview

Review current challenges for implementing data science best practices

Understand the benefits provided by the Team Data Science Process (TDSP)

Review resources provided as a part of the TDSP

Create an Azure Machine Learning Service workspace

Provision compute infrastructure for Azure ML

Data Science Challenges

Data Science Disciplines

**Computer
Science**

**Data
Management &
Mining**

**Research &
Domain
Expertise**

**Mathematics &
Statistics**

Computer Science Best Practices

Version Control

Method to track team project assets over time

Continuous Delivery

Automated process for building, testing, and deploying a project

Scrum Methodology

Agile framework for how teams plan and execute work

Data Mining Processes

CRISP-DM

Cross Industry Standard Process
for Data Mining

KDD

Knowledge Discovery in
Databases

“87% of data science projects
never make it into production.”

Venturebeat

Machine Learning Workflow Goal

To increase the likelihood of producing actionable insights that can be operationalized within your organization by leveraging cross-discipline best practices.

Introduction to Team Data Science Process

Team Data Science Process (TDSP)

An agile, iterative data science methodology to deliver predictive analytics solutions and intelligent applications efficiently.

TDSP Components

Data Science Lifecycle

**Standardized Project
Structure**

Infrastructure and Resources

Tools & Utilities

Data Science Lifecycle

Project Structure

TDSP template available in Github

**Enables the storage of all project assets
for each phase in the repository**

**Includes templates for standard project
deliverables**

- Project charter
- Data reports
- Model reports
- Model performance metrics

“This infrastructure enables reproducible analysis. It also avoids duplication, which can lead to inconsistencies and unnecessary infrastructure costs. Tools are provided to provision the shared resources, track them, and allow each team member to connect to those resources securely.”

Microsoft, TDSP Documentation

Tools & Utilities

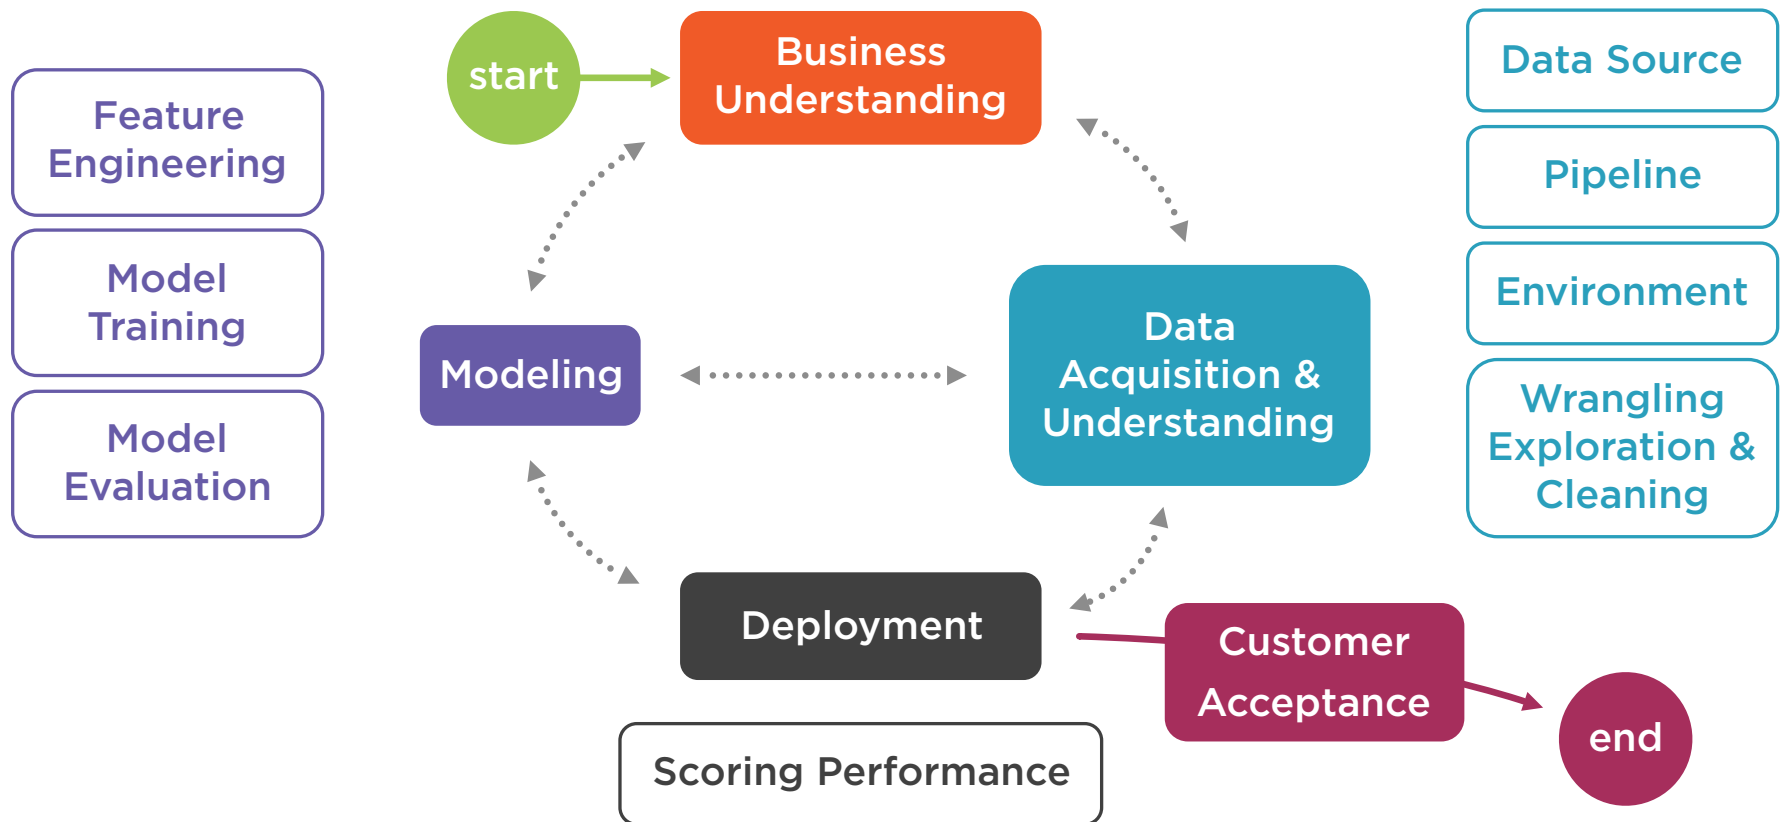

Interactive Data Exploratory Analysis and Reporting (IDEAR)

- R
- MRS
- Python

Automated Modeling and Reporting in R (AMAR in R)

TDSP Data Science Lifecycle

Data Science Lifecycle

TDSP Team Roles

**Project
Lead**

**Data
Scientist**

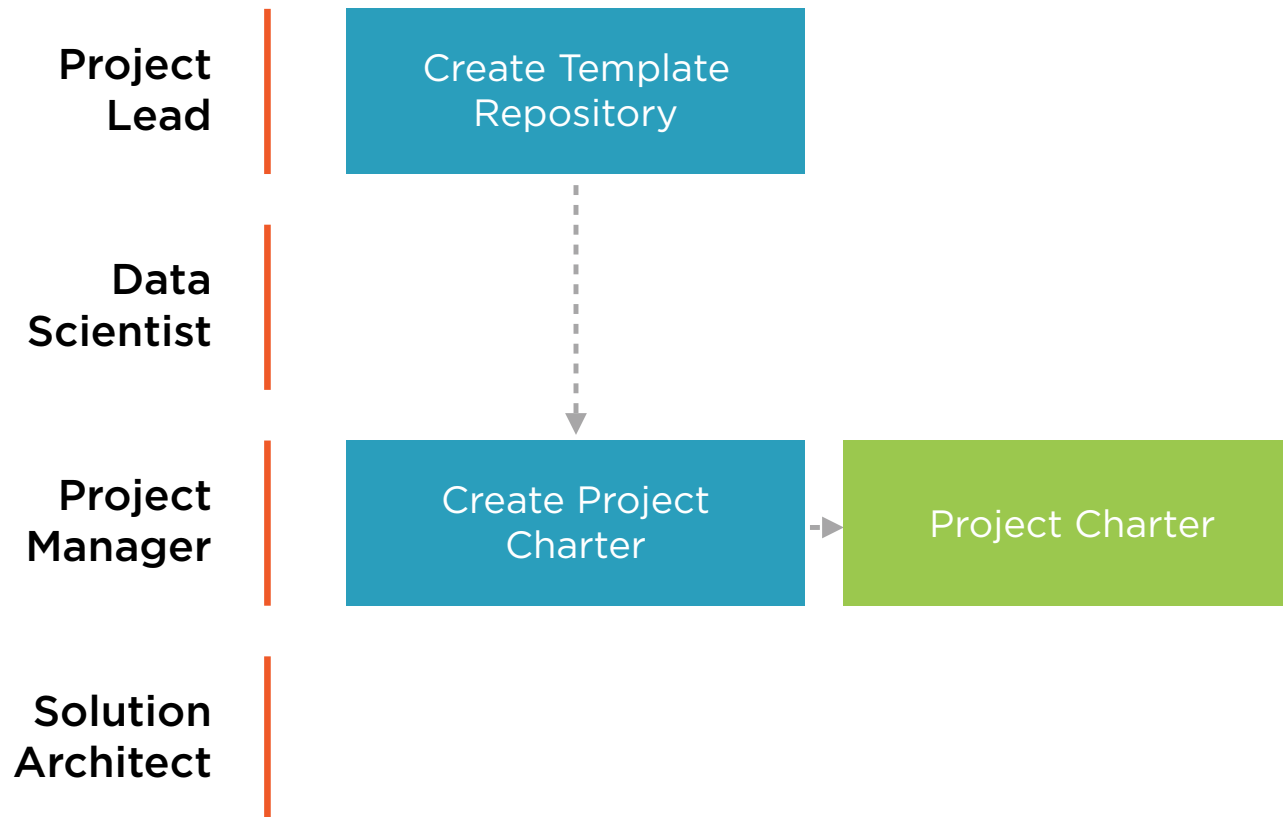

**Project
Manager**

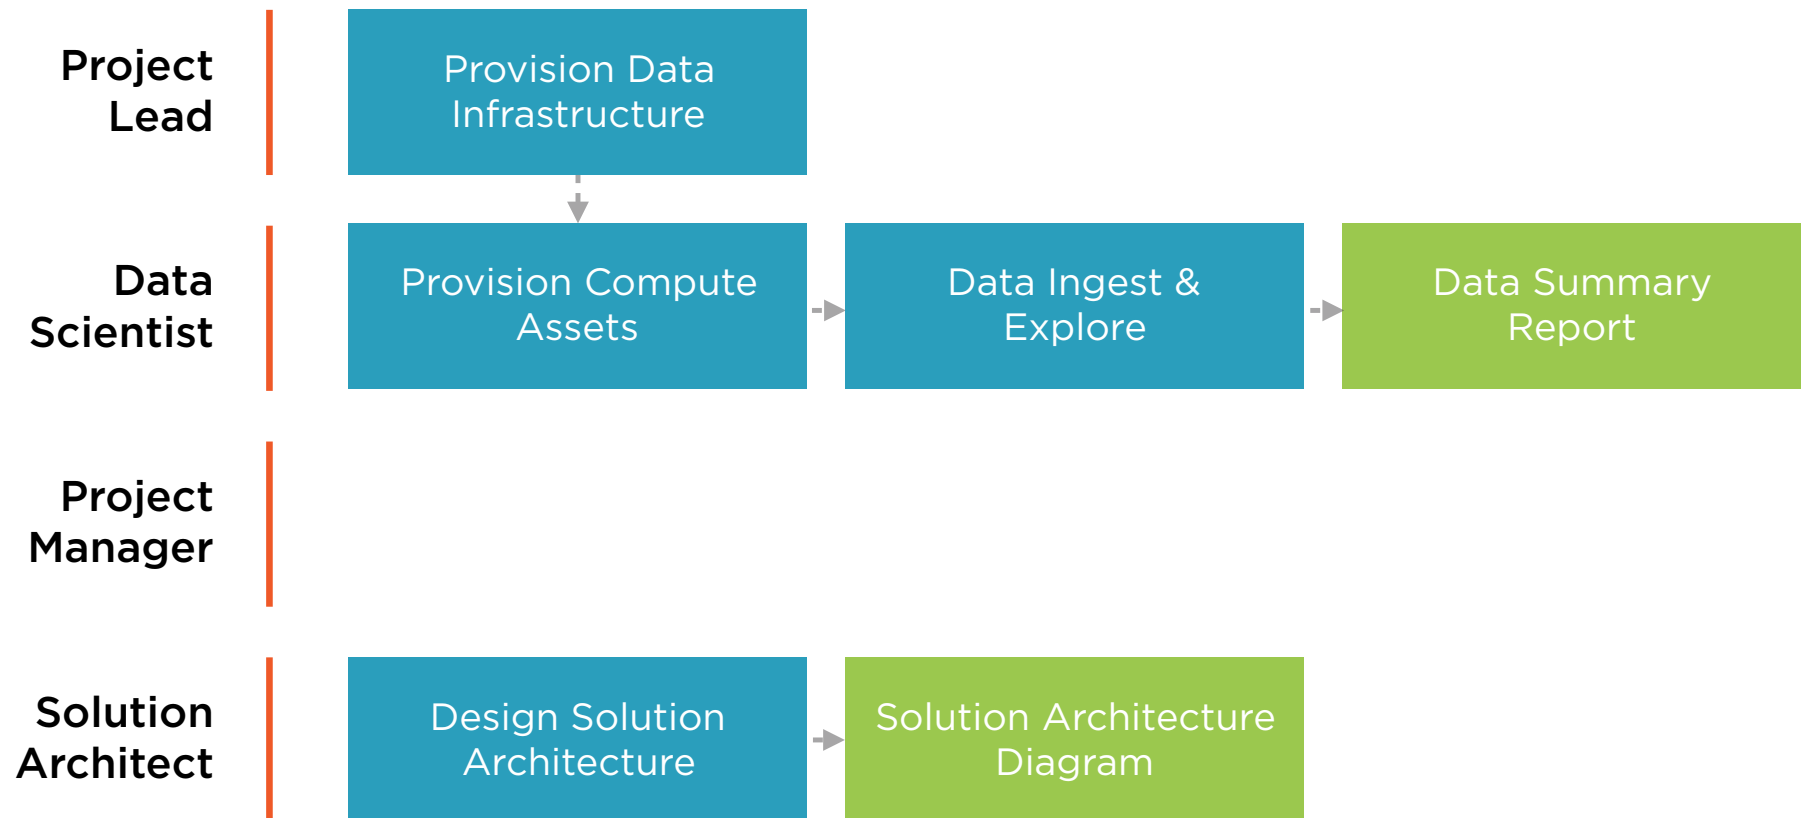

**Solution
Architect**

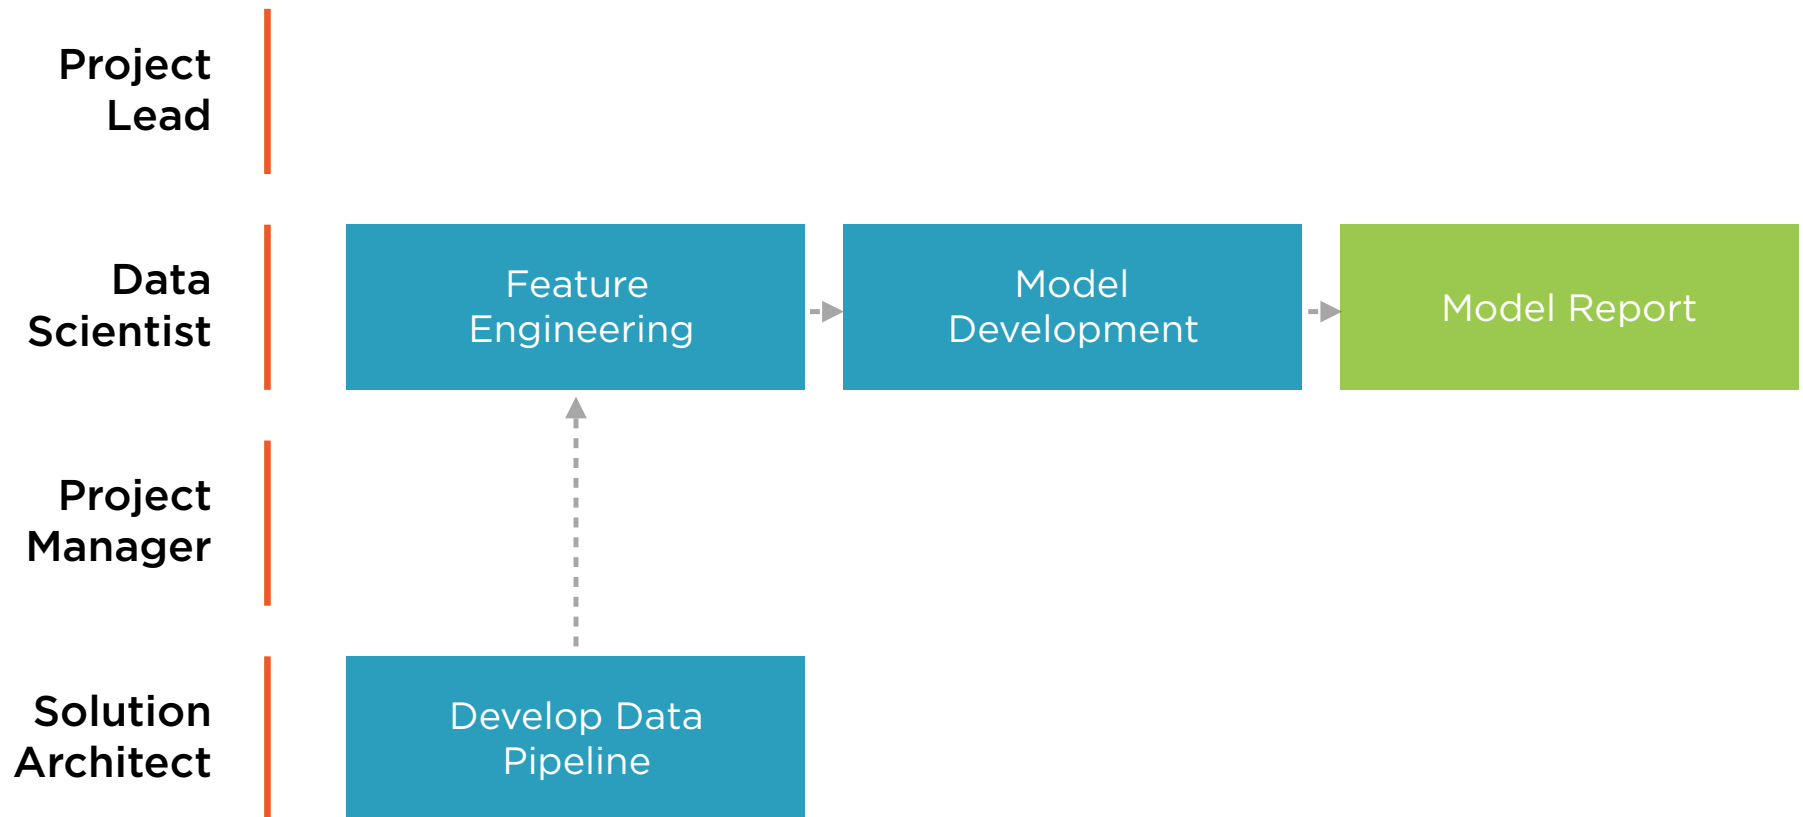

Business Understanding

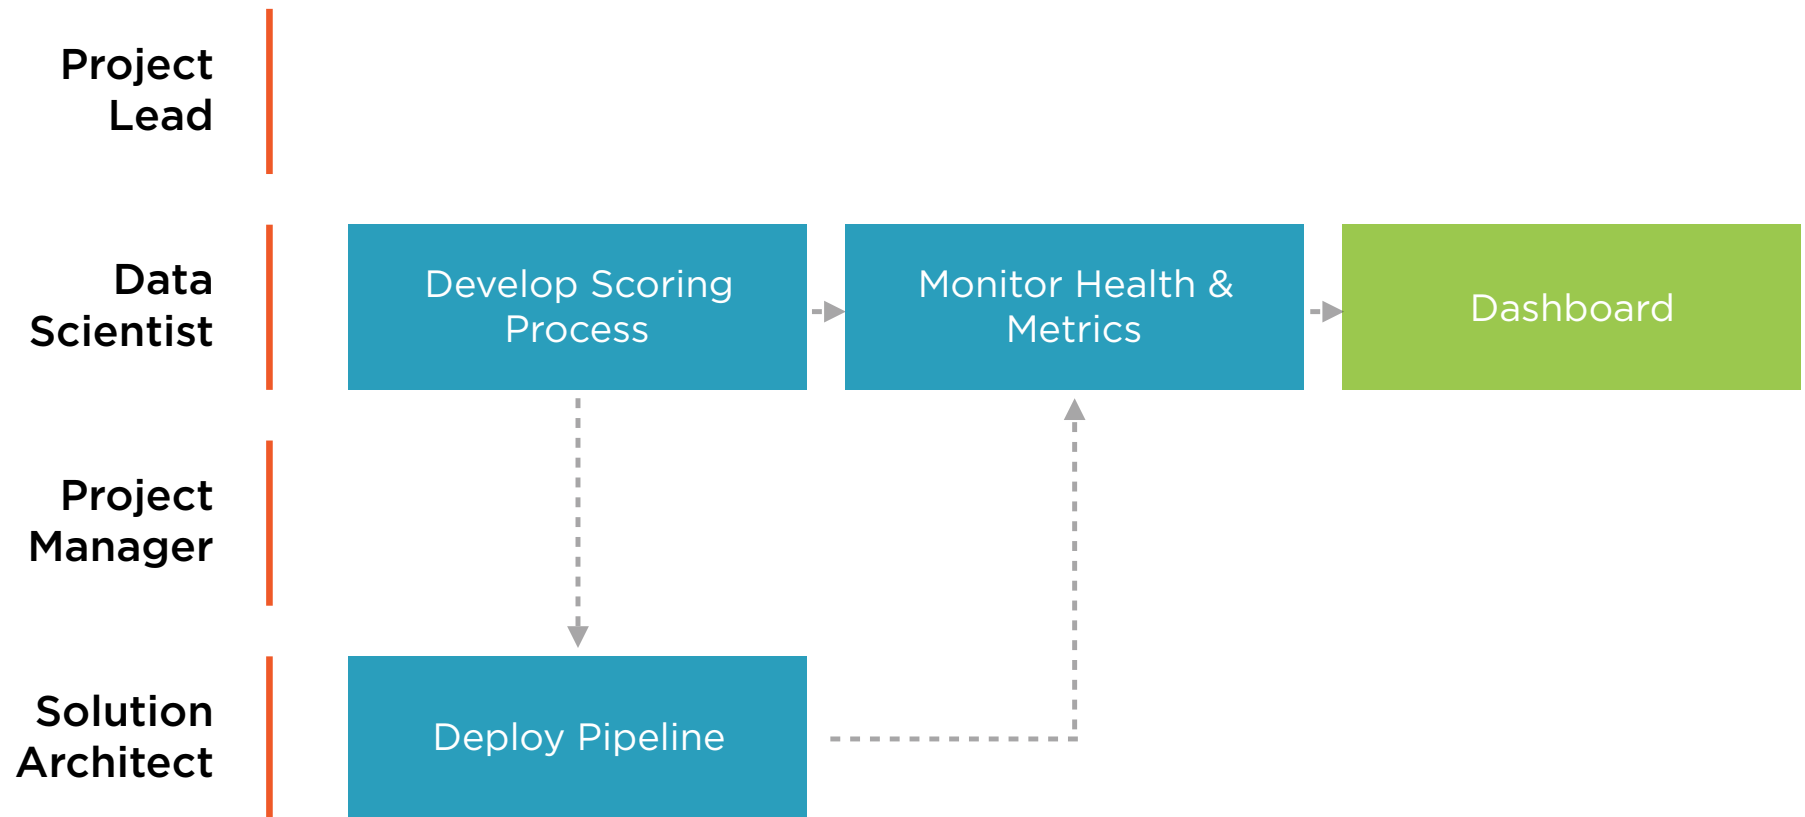

Data Ingest & Understanding

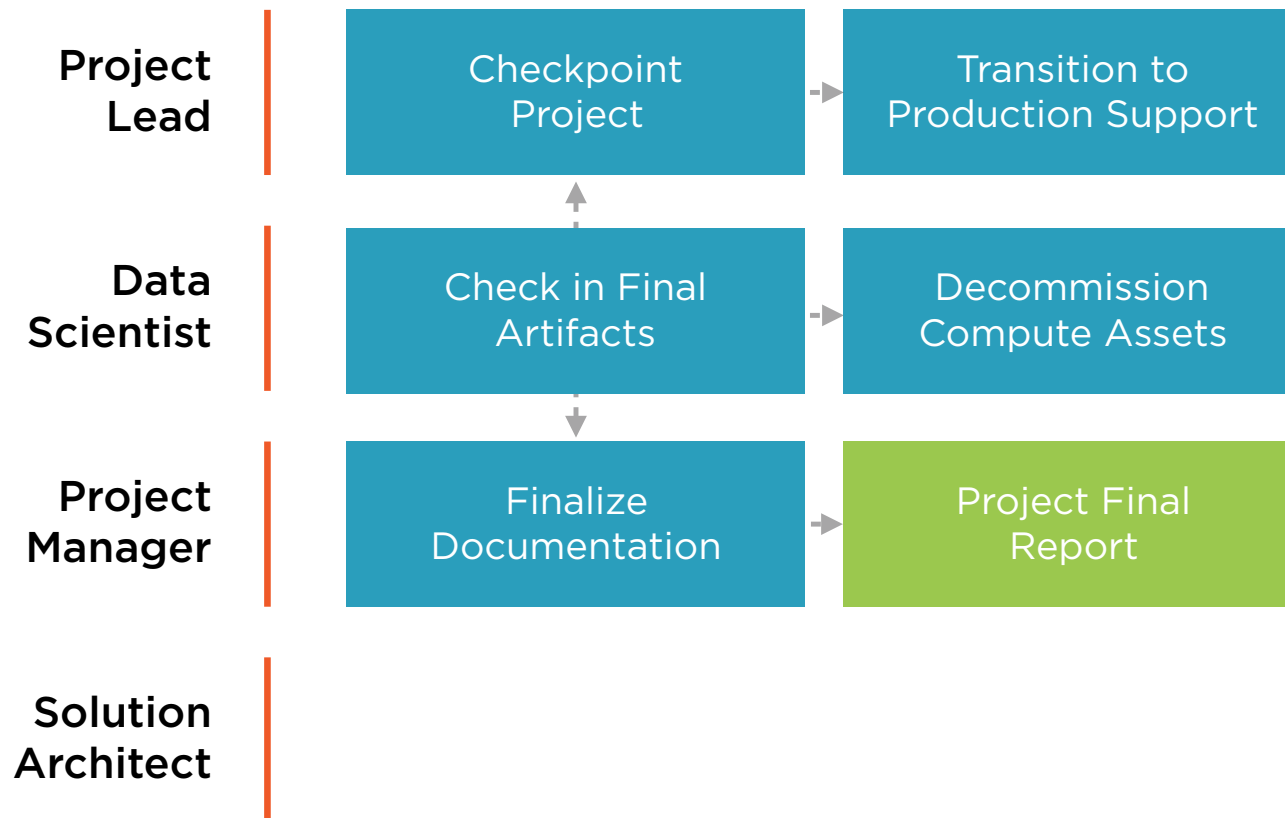

Modeling

Deployment

Acceptance

Reviewing TDSP Resources

Demo

Review the TDSP template in Github

Review the TDSP Tools and Utilities in Github

Creating a TDSP Project

Demo

Create an Azure ML workspace

Clone the TDSP project template

Configure VS Code to work with Azure ML

**Provision compute resources in Azure ML
from the Python SDK**

**Decommission compute resources in
Azure ML from the Python SDK**

Summary

Overview

Reviewed current challenges for implementing data science best practices

Understood the benefits provided by the Team Data Science Process (TDSP)

Reviewed resources provided as a part of the TDSP

Created an Azure Machine Learning Service workspace

Provisioned compute infrastructure for Azure ML
